

The user experience you need, the security you demand

Surface Hub was designed to be appliance-like, ensuring a consistent, “walk-up” user experience—without sacrificing security

Familiar and trusted:

Windows 10 Universal Apps

- A single app will run on all of your Windows 10 devices—not just your Surface Hub.
- These apps have been tested for safety and are the only apps Surface Hub runs natively.

Vigilant about data safety

- Post working session, data is wiped from the system to protect sensitive information.
- Next group gets a clean slate to work from.

Protected with disk encryption

- Hard drive is encrypted by Bitlocker by default.
- If the drive is removed, Bitlocker key is required to re-enable it.

Thoughtful user restrictions

Tools such as command prompt, control panel and regedit are removed, so device can be placed in public without fear of tampering.
