

Axiom is excited to introduce our new BENDnFLEX™ family of OM4 fiber cables.

Simply put BENDnFLEX™ cables by Axiom are OM4 bend insensitive fiber patch cables that typically plug into a transceiver.

BENDnFLEX™ cables combine the high performance of an OM4 multimode fiber optic cable with unique bend-tolerant properties. This means that where there are issues with tight spaces, bends and curves, BENDnFLEX™ can be installed and still deliver the fastest speeds without any loss of signal.

Axiom's BENDnFLEX™ line offers several key features that packaged together deliver more benefits than any other bend insensitive cable on the market.

Key Features Include:

- OM4 bend-insensitive fiber
- TAA compliant - all BENDnFLEX™ cables
- Backward compatible with all installed fiber, including OM2 and OM3
- Plenum rated
- Uses Corning Glass (the leader in fiber optic glass manufacturing)
- Lifetime warranty and technical support
