

TOP REASONS: XTREMIO FOR DATABASES

Redefine Agility for Application Landscapes

XtremIO gives you unmatched efficiencies for all database workloads. A scale-out database storage platform that consolidates and accelerates everything. Supercharge production, dev/test, and BI/analytics workflows with incredible data reduction and copy data management services. You get incredible and predictable scale-out performance with a low total cost of ownership.

1

DATABASE REPURPOSING ON DEMAND

Database copy management is no longer a point of contention between DBAs, application owners and the storage admins. Databases copies can be created on-demand without impacting production workloads and be repurposed for test/dev & reporting/analytics. Increasing database copy availability while providing production level performance greatly accelerates the software development cycle and improves business decisions system effectiveness.

2

CONSOLIDATION WITHOUT COMPROMISE

Unique in-line data reduction capabilities combined with inherently balanced scale out architecture enables copies of production databases to be created at almost zero cost. You can finally put all your database instances and apps on one array, with unique scale-out all-flash performance and capacity. No physical storage is initially used for these copies which also share the same performance capabilities since they leverage the same paths and access the same data.

3

CONSISTENT & PREDICTABLE PERFORMANCE

Run your enterprise apps at the speed of business with radically consistent sub-millisecond latency. Meet all your SLAs, all the time. Need more IOPS, bandwidth or capacity to meet changing business requirements? Done. Just add X-Bricks online, with no downtime. IOPs are just one aspect of performance planning. Ensuring the response time meets acceptable SLA thresholds for the application is key for optimal behavior. Providing sub-millisecond response can greatly reduce the performance tuning required to meet SLA's and reduce support calls.

4

FASTER TIME TO VALUE FOR APPLICATIONS

XtremIO reduces complexity and enables unequalled agility for database & application environments by virtually eliminating architecture discussions between storage admins and the DBA or application owner. XtremIO provides performance combined with industry leading physical capacity utilization, the simplicity of the platform shines through by accelerating the implementation cycle and reducing design decisions and management.

5

DBA CONTROLLED DATABASE PROTECTION

Copies of databases can be configured to expire or refreshed on-demand. Production databases can be protected individually or as part of a consistency group to ensure write order fidelity for an application. Game changing integration with EMC's AppSync also provides simple self-service or automated SLA-driven data protection at DBA definable service levels.
