solution

Insight
PUBLIC SECTOR

Insight Education helps K-12 schools and districts meet the technology demands of today's evolving classroom — from integrating devices to storing data and protecting student information.

With cost-effective solutions and services, we provide educators with the newest technologies and the technology expertise needed to address all curriculum standards in a secure environment. We also offer the tools students need to engage with instruction and become college- and career-ready.

Insight's Leading Partners

Why Insight?

Insight
PUBLIC SECTOR

EXCLUSIVE PRICING

Our public sector contracts give you exclusive access to low prices on technology, plus additional IT resources.

EXPERTISE

We have certified and experienced specialists, architects, consultants and engineers ready to help you.

WE'RE YOUR PERSONAL CONSULTANT

COMMITTED

We develop strong client relationships, and provide solutions and services throughout your entire IT lifecycle.

We listen to you and assess your needs. Then, we customize solutions that can help you improve student outcomes and meet your goals.

ACCESSIBLE

With a local presence and a nationwide reach, our team is available to deliver on our promise.

Online learning

By combining the best of traditional classroom teaching with online learning models, educators are now offering courses and standards-aligned assessments online. Through this online curriculum, educators are helping students become college- and career-ready.

Digital content

Educators are finding a better way to engage students and draw them into the learning experience with digital content, which includes material found online, courses that offer video-led instruction and the use of digital textbooks.

1:1 mobile devices

Through Bring Your Own Device (BYOD) and school-provided technology programs, a growing number of schools are ensuring each student has access to a mobile device for more robust learning in the classroom, whether it's a smartphone, tablet or laptop computer.

LMS prescriptive learning

Teachers are using centralized learning management systems to manage lessons and assignments, and to monitor student progress. With easy access to student data, today's educators are developing learning paths for individual students.

Personalized learning

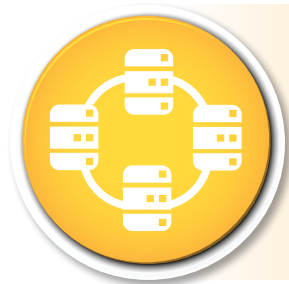

This student-centered instruction uses real-time data and data from throughout the year to evaluate student progress, better understand the areas in which students need help, and develop individualized learning paths to help them succeed.

Protecting student data

With the growing use of mobile devices, online courses and online reports, there is a vast amount of student data that needs to be protected. Schools and districts are looking for a solution that lets students and parents log on, in a secure environment.

Virtualized data centers

Districts are using virtualized data centers to secure sensitive student data and offer multiple users access to programs. These data centers provide remote storage, support and protection for all applications — with an appropriate disaster recovery component.

Desktop virtualization

The use of virtualized desktop computers is helping districts manage equipment, software and servers more effectively. Now, staff members can access information and programs hosted on servers in data centers — from anywhere.

Shift to the Cloud

Districts are increasingly moving to the Cloud. As a solution for secure access to important information from anywhere, on-premise applications such as email, backup files and storage are being shifted to the Cloud.

Insight is a leading provider of technology solutions

Insight
PUBLIC SECTOR

INFRASTRUCTURE

Get help implementing a network that supports the use of mobile devices and online, standards-aligned assessments.

- Wireless
- Networking
- Virtualization
- Server storage
- Network refresh

MOBILITY

Outfit students with 1:1 mobile devices or implement a BYOD program over a reliable, secure network.

- Mobile devices
- BYOD support
- Device management
- Security
- Wireless infrastructure

SECURITY

Offer a completely secure environment to protect student data and enable mobile device management.

- Security health check
- Firewall
- Virtual Private Networks (VPNs)
- Remote access
- Web security

DESKTOP VIRTUALIZATION

Provide a mobile solution for managing assessments and reviewing student data, and remote access for IT maintenance and support.

- Desktop infrastructure
- Application deployment
- Mobile device management
- Image management
- Unified workspace

DATA MANAGEMENT

Give educators a virtualized data center and Cloud server that ensures information is secured and backed up.

- Virtualization/Cloud
- Storage infrastructure
- Storage management
- Data backup

Insight is a leading provider of technology solutions
